

1202 Kirchoff's Laws

- Uses a common 9V battery, and a 1.5V cell, draws only milliamps.
- Put both batteries in – get access to three voltage loops.
- Put in one battery or cell – the loops containing the voltage source behave differently – gives you access to two more voltage loops.
- Easy to get quality data.
- Two junctions available to verify Kirchoff's current law.
- Proformas and other teaching resources available.
- Easy to check the integrity of the board and components.
